

# SECURITY AND ACCURACY ARE OUR TOP PRIORITIES

Lightning fast and amazingly simple to use, AccountChek® is trusted by leading financial institutions because it's safer than emailing, faxing or mailing copies of your bank statements and sensitive financial data.

## 1. YOUR DATA REMAINS PRIVATE

- Your credentials are masked as you enroll, protected with bank-level encryption and 24/7 security monitoring while your order is being completed. Only with your permission can an asset report be pulled for your lender.
- Your data stays in the United States in the Microsoft Azure Cloud, which uses state-of-the-art systems and real-time monitoring to keep your data secure.

## 2. WE PROTECT YOUR DATA WITH BANK-LEVEL SECURITY

- AccountChek undergoes rigorous third-party audits and maintains industry standard-settings and security certifications.
- Your data is encrypted while in transit, and is submitted directly into databases protected with hardware and software encryption.

## 3. WE ARE A READ-ONLY PRODUCT

- The report we provide is accessible to your lender only through an encrypted digital key, and it's delivered in a read-only format.
- The data comes directly from your accounts, so there are no errors or missing pages that could slow the process down, and you can choose which accounts to share.

## 4. WE RETRIEVE ONLY DATA

Because we are so careful with your data and how we deliver it, submitting information through AccountChek is significantly more secure than emailing, faxing or mailing it.

We  all the boxes for simple, accurate and ultra-secure asset verification.
